sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will NOTE: This record contains 78 individual g of 1187 bp in length of 100 bp g of 1203 bp in length of 100 bp of 1166 bp in length 100 bp of 1086 bp in length 1130 bp in bp in bp in length ä ä ä ä length length length length length length length

                                                                                                                                                                                    Submitted (02-APR-2005) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA, nelsayed@tigr.org Medical Center Dr., Rockville, MD 20850, USA, nelsayed@tigr.org Medical Center Dr., Rockville, MD 20850, USA, nelsayed@tigr.org Lockwille, MD 20850, USA, nelsayed@tigr.org Medical Center Dr., Rockville, MD 20850, USA, nelsayed@tigr.org Lockwille, MD 20850, Were done Medical Medical Medical Amountains of algorithm GLIMMER with similarity coordinates) were done manually based on detailed comparisons with the T. cruzi and L. major genomes. Genes on BACs were assigned a systematic name based on the chromosome and the BAC from which they originated (e.g. TD03.27F10.410). Gene products were assigned a putative function when they shared significant similarity with experimentally characterized gene products or when they contained functionally known protein domains. Gene products were labelled either 'hypothetical protein', or 'hypothetical protein, conserved' in the case of products shwing significant similarity with proteins or domains of unknown function from other organisms. Gene products of unknown function with predicted orthologs in Trypanosoma cruzi and Leishmania major genomes were automatically classified as conserved proteins. Short profein, unilkelv'.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Putative protein coding regions (>30 codons) were predicted by combining the output of the gene finding along the GIMMER with similarity data and manual annotation of open reading frames. Further refinement of gene models (additions, deletions and alterations to boundary coordinates) were done manually based on detailed comparisons with the T. cruzi and L. major genomes. Genes on BACs were assigned a systematic name based on the chromosome and the BAC from which they originated (e.g. Tb03.27F10.410). Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ghedin, B., Blandin, G., Bartholomeu, D., Caler, B., Haas, B., Hannick, L., Shallom, J., Hou, L., Djikeng, A., Feldblyum, T., Hostetler, J., Johnson, J., Jones, K., Koo, H.L., Larkin, C.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Trypanosoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein, unlikely'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            genomes were automatically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             products were assigned a putative function when they shared significant similarity with experimentally characterized gene products or when they contained functionally known protein domains. Gene products were labelled either 'hypothetical protein', or 'hypothetical protein, conserved' in the case of products showing significant similarity with proteins or domains of unknown function
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Aken,S., wanies

BAC clone RPC193-10C8 from Trypanosoma brucei chromosome 2.
Putative protein coding regions (-30 codons) were predicted by combining the output of the gene finding algorithm GLIMMER with similarity data and manual annotation of open reading frames.

Purther refinement of gene models (additions, deletions and alterations to boundary coordinates) were denomenable on BACs were assigned a systematic name based on the chromosome and the BACs were assigned a systematic name based on the chromosome and the BAC from which they originated (e.g. Tb03.27F10.410). Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ghedin,E., Blandin,G., Bartholomeu,D., Caler,E., Haas,B., Hannick,L., Shallom,J., Hou,L., Djikeng,A., Feldblyum,T., Hostetler,J., Johnson,J., Jones,K., Koo,H.L., Larkin,C., Peterson,J., Khalak,H.G., Salzberg,S., Simpson,A.J., Tallo Aken,S., Wanless,D., White,O., Wortman,J., Fraser,C.M. and El-Sayed,N.M.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            products were assigned a putative function when they shared significant similarity with experimentally characterized gene products or when they contained functionally known protein domains. Gene products were labelled either 'hypothetical protein', or 'hypothetical protein, conserved' in the case of products showing significant similarity with proteins or domains of unknown function from other organisms. Gene products of unknown function with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (18-JUN-1999) The Institute for Genomic Research, Medical Center Dr, Rockville, MD 20850, USA 3 (bases 1 to 150671)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Trypanosoma brucei
